What you may not realise is that the audio system fitted by your car's manufacturer may not be giving your favourite songs But where do you start We have car audio experts in each Halfords store, so we'll be able to help you check your existing system and make recommendations for the best replacement. And that's where we can step in our in-store car audio colleagues have plenty of expertise when it comes to even the most complex installations. All of the car audio systems we sell only take an hour or so to fit, so you can drive away with your new and improved system in no time! <http://serenetravels.com/userfiles/3g2a6-lk201-ev1-manual.xml>

If you'd rather let a trained Halfords car The stereo is the rectangular box that usually sits in the

middle of your centre console and provides you with the controls, buttons and screen so you. Whilst these are still great, we also have a range of Apple CarPlay and Android Auto compatible head units. These stereo systems use a just remember you'll need to get Apple Carplay if you've got an Apple phone and Android Auto if you've got an Android phone. If you're looking for a quick upgrade, then this is where you could potentially swap out the standard speakers. We'll need to know which speakers are already in place, so you can either check yourself or if you're unsure, our expert audio fitters can help guide you through the process. These are the speakers you'll find in your door frame, consisting of a tweeter a small speaker that produces high frequencies, like notes and vocals and a woofer. These speakers are fairly easy to swap out for an upgraded set, improving sound quality and sometimes even allowing for more volume. This is a larger speaker that only deals with bass notes, and will give your music some serious kick especially with the volume turned up. Subwoofers take up there are however some underseat slimline subwoofers for those that are short of space. And usually, this is the best place for them. The inside of a car just isn't optimised for fantastic sound. Just select add fitting at the online checkout or ask a colleague when buying. If you're looking for easy functionality and cool features, then an Apple CarPlay or Android Auto compatible stereo and if you're a true music lover, then a full speaker overhaul with the addition of a performance head unit, amplifier and subwoofer in the boot or a slimline version under the seat would be the best. Just bring your car back when the lease is up and we'll take your improved car audio system out, refit the Halfords now offer B2B stereo and speaker fitting at competitive prices.

Check out our buyers guide Pioneer stereo head units are easy to fit, easy to use and provide excellent sound quality when paired with decent speakers. They will however do the job with the standard speakers in your car, making them a great upgrade option. With the Pioneer SPHDA230DAB, you'll be able to connect your iPhone too, with Apple Carplay built into this model. Kenwood head units are easy to install and easy to use, so you'll be able to set up your phone and music without much effort, plus there's tons of features on even the most basic models, ranging from touch screen technology to reversing and dash cam integration depending on the model you choose. Some of Sony car stereos feature touch screens, sound optimisation features like extra bass, and easy linking to steering wheel inputs. Optisound speakers are car specific, so fit seamlessly into door panels. They have bespoke details to ensure the best sound quality regardless of the shape and size of your car. Optisound is invisible once installed, making it perfect for lease hire or company cars. It can be easily removed when the car is sold or left in without any damage. Pure now offer DAB adapters to bring great quality DAB radio into your car. All have an easy to use controller and can be installed to play your new stations through your existing stereo and speakers. This is why it's often easier to leave the job to a Halfords car audio expert. We fit thousands of car audio systems each year in the UK, so we know what we're doing and we'll get it right first time. Chat to a Halfords team member in store or book your fitting at the checkout if you're buying online. Once you've booked your appointment online and chosen your stereo, speakers and other car audio features that suit your needs, our installation experts will get everything looking and sounding fantastic, before giving you a full demonstration so you know how everything works. Our fully fitted prices also include any additional parts and labour.

That just leaves you with the most difficult job picking the right playlist. Although choice is a very personal thing, there are some brands that truly stand out. Their models tend to be named after cities, and they generally score highly when people look for the top rated audio system. Although all the models have been favorably reviewed, one standout for Clarion is its digital audio system for cars. Based in Japan, the company has established a reputation for high quality equipment even if it's not one of the biggest brands. Its products offer extremely good value for money. That means not just car stereo, but also multimedia units that offer DVD and GPS, as well as speakers. They cover the entire gamut of car entertainment. Particularly popular are Kenwood CD changers. It's always at the cutting edge of technology and coming out with new products that score well on consumer

reviews. The stereo equipment is quite sleek and all of the controls are fun, though not necessarily logical. It may be necessary to search through the manual to find all the control functions. The speakers can easily handle all different frequencies, though the front speakers tend to lack in the bass department. The mid and high tones are very natural and make for excellent listening. If you want top of the line, Blaupunkt is an excellent stereo manufacturer. This brand does not cut corners or sacrifice quality. It is rare for the speakers to actually face the passengers and most of the components are shrunk to fit into the dashboard. Sound reflects off of the different panels and interior and it is very difficult to predict how this works. There are also issues with external sound. High quality stereo components ensure that the best audio possible will come from your speakers. Having a subwoofer and amplifier that matches the speakers is very important. By purchasing a complete Blaupunkt stereo you can be sure that each component works perfectly with the rest of the stereo.

Make sure that you know the individual that is installing the stereo into the car, should any problems occur in the future. Additionally ensure that the fitter has all of the tools necessary to fit the Blaupunkt stereos. Most factory brand stereos have special wire harnessing, adapters and fittings in order to work in your vehicle. This is perfect for those individuals that like plenty of buttons. It can take a little while to get used to the buttons and functions of them, as they are not necessarily all logical. There is a great fade in function when a cassette or CD is inserted. This prevents a very strong and jarring sound increase depending on the audio. The only main issue is at very high volumes, the clarity does decrease. Blaupunkt offers several different stereo systems. All are top of the line and offer the best audio experience for the car. Delco has been a trusted name for years for OEM stereos, as car manufacturers seek out the sound and stability of the units they have to offer. General Motors used one of the stereos in the 1929 LaSalle, and from that point on Delco has remained a staple in many of the cars that come off the line. Improvements to the 1929 model were made in 1931, and they were continually made to keep up with the needs of consumers. Modern units are still simple to use, and they fit well with the electrical abilities of the cars they're in. They may have better sound and more advanced features, but they remain as classic as ever. Delco models can be installed by professionals, or you can tackle the installation on your own. Delco has never wavered in its commitment to its customers, and you can bet the company will be around for years to come. A JBL subwoofer is a popular upgrade among audiophiles who wish to improve the sound output of any existing in-car audio system. Another factor worth considering is the subwoofer enclosure to ensure a rich, deep reproduction of sound.

The GT52402BR speaker enclosure from JBL includes dual preloaded enclosures for 12-inch subwoofers for competition quality sound. The GT510D 10-inch subwoofer has dual 4-ohm voice coils that faithfully reproduce bass levels with a friendly price. JBL subwoofers are available in a wide array of sizes and configurations designed to cater to the most discriminating in-car audio and video set up. The amplifier should also be given attention, and should match with the overall power output of your subs and speakers. Visit the JBL online store to know more. There's a good reason for this. They give very high quality at a reasonable price as an aftermarket car stereo. JVC is one of the best-known brands and one of the biggest brands in the aftermarket car stereo market. They tend to have lower prices, and be a trusted, reputable brand. People know they're buying a good product. In most cases, you only have to insert the unit in the dashboard with an appropriate face plate and connect the harness and the speakers. The stereo manual will give you all the details for the installation of the JVC car stereo, but it's generally so simple that those without any experience can do it. It's one of the extra selling points for the brand. This saves money, as there's no need to take the car to a professional for installation. The work done at home can look just as good in most cases, so the savings come from all sides. This will allow you to put whatever stereo you want in your vehicle with a housing designed to fit right into the dash. They are made of a high quality plastic that will not break easily. The kits allow for different positioning on your dash for the stereo, and they

often provide storage in the gaps that remain. All Metra kits come with instruction manuals for you to put them in on your own. The kit will come with all the Metra accessories you need to hook up your stereo, but the wires may vary based on the car you have.

If you look for your specific year, make and model of vehicle when you start selecting an installation kit, you'll have a lot easier time when it comes to putting the stereo in. You may also want to think about stereo selection so you know if you have enough room on the face of the kit or not. If you don't, there should be another option through Metra that will work for both the car and the stereo you want. It includes a USB port, so you can play music from your MP3 player. They have a large range of audio receivers that work not only with MP3 players, but also with DVDs. They see what was once the car stereo as an onboard entertainment center. As you go up the price scale, units also play DVDs, transmitting them to screens elsewhere in the vehicle. Also offering receivers for digital radio in your car, Pioneer stereo is staying at the forefront of the game, with Bluetooth technology available. For those who need more, the company also has CD and DVD changers, which can store up to 12 discs for playing as you drive. These are small, but ample for a front seat passenger. Other screens for those in the rear seats can be added. This is where volume is controlled, as is the music source, and all other settings of the different components. The in dash receivers are all digital and can include GPS navigation and a CD player. Several of the different receivers available include the AVHP5200BT, AVHP4200DVD, MVHPH8200Bt and more. The AVH products all can use iPod, DVDs, USB input, sound receiver, built-in Bluetooth, touch screen display and comes ready for HD radio and SAT radio. The MVH series has a sound receiver, USB input, iPod playback, built-in Bluetooth, and several RCA Preouts. They also have special application speakers. The least expensive speakers are the Dseries, though these are still excellent, high quality speakers. The cone in the Dseries speakers is made of volcanic rock which provides crisp, accurate and smooth sound.

Aseries speakers are perfect for those interested in boosting bass and the low frequencies. These speakers outperform all factory speakers and provide plenty of power. The cone is bigger and better, which makes it possible to boost the output. It also comes with an extra sensitive tweeter for higher frequencies. The shallow mount is a very thin subwoofer that uses ibFlat. The Champion series allows for easy installation and greater flexibility. It is the perfect way to create that custom sound you desire from the car stereo. The PRO series uses patented air suspension technology, which provides the maximum sound in a small space. The GM series are built strong and can support multiple power channels. Compared to other amplifiers, you get more watts per dollar from Pioneer. The amplifiers are all bridgeable, so it is possible to add more as your listening needs change. The digital series uses digital amplification. Currently, Pioneer offers a full digital stereo line, so it is possible to go completely digital. Sirius is a subscription radio product, meaning that you have to pay to get it. Many cars come with a threemonth free trial. Here are some benefits and downsides of Sirius. They have a great mix of music stations, sports stations and political talk. There are fewer commercials on Sirius, which you should expect since you are paying for the use. The sports packages are great and you can get games from all over the country, and from a wide range of sports. Many people primarily get Sirius due to its ability to provide political and talk radio in high quality. Many people want a variety in the genre of music, but some are too specific. Another con is the price, since you can turn on the radio or your iPod for free. The monthly fees do not cover the start up costs, which include activation, the system itself and other things. There are reception problems as well in certain situations, like being inside, under a tree or bridge, or living in rural areas.

For example, a Bluetooth audio system will work differently with a CD head unit. You will find that multimedia stereos can be useful to allow you to choose a variety of different mediums. You will find that the cost of the latest stereos will be higher than older models. Find out whether any replacement Sony stereo parts that might be needed are readily available on the market. Newer models have more advanced technology than older varieties, meaning that more work will be necessary when

making a large change. You will find the serial number is located on a small piece of paper on the bottom or back of your receiver. You will still have to slide the radio receiver out of its holder to turn it upside down, and you will find the serial number there. Remember that Bose designs its systems around the cars they are building them for, so it takes a lot of electronic work and interface to make this system operate correctly. The runner up some could argue is the leader, is Sony, which makes a variety of complicated systems for vehicles. Then there's the specialized audio versions offered by Mercury. An MP3 input is nothing more than a standard three-way car stereo input jack. In other words, if you were to look at an MP3 input, you would see the long outer shaft is for ground, the second or middle shaft is for one set of speakers, and the first shaft is for the other set of speakers. For some reason, once it was reintroduced some years ago as an MP3 player, the name stuck. Although it is nothing more than a standard stereo input device. PUBLISHED ON February 26, 2020 New car models come with a large touchscreen that allows you to control the car's stereo and several other functions. If you have an older car, you don't have this modern feature, but you can change that fact. Buying and installing an aftermarket car stereo can breathe new life into your car. This will give your car a modern touch and improve the functionality of your car's stereo. Check out these car stereos to replace yours. Pros Pros The interface is userfriendly, and Apple CarPlay works seamlessly. The backup camera is easy to install, and the unit isn't overly stocked with complicated controls. Cons Cons The touchscreen is capacitive and can be difficult to see when it's very sunny outside. There's no USB plug in the front. It also has a built-in amplifier. Pros Pros You can play files stored on a USB drive for more audio options. It also works with Spotify and Pandora. Cons Cons Installation can be challenging and confusing. There is an issue with the unit not turning on after a few months of use. Best Value Pioneer inDash Stereo Receiver Check Latest Price Honorable Mention Kenwood InDash Car Stereo Receiver Check Latest Price Summary Summary Fit this stereo into the stock space in your dash. There are 2.5V preamp outputs and a three-band graphic equalizer. Pros Pros This unit is easy to install and connect to your iPhone. It will play and charge your phone at the same time. The display is bright and easily read during the day. Cons Cons This unit will only work with certain Android phones, so be sure to check compatibility before you purchase. You may also find that the unit won't turn on after the initial installation. Honorable Mention Kenwood InDash Car Stereo Receiver Check Latest Price Written by Andra DelMonico Published February 26, 2020 New car models come with a large touchscreen that allows you to control the car's stereo and several other functions.

You can also use the Dynamic Stage Organizer to put virtual speakers on your dashboard. The stereo's interface is simple to navigate, which isn't always the case when it comes to aftermarket units. The Apple CarPlay works effortlessly, and it's easy to connect the backup camera. It's very reliable for the price, the physical controls are very good, and it is not overly complicated with too many options. Essentially, if you have it paired with the right speakers, it's a great little unit. A couple of downsides are that the touchscreen is capacitive instead of resistive touch, and the screen is a little hard to see if you're driving in the bright sunlight. Also, it doesn't have a front USB plug, and the screen may be intermittently glitchy. Best Value 2 Pioneer InDash Stereo Receiver Check Latest Price For a single DIN car stereo, this unit is quite the powerhouse. It looks like your average stereo, but once you examine it further, you discover more features that make it worth buying. It not only has radio, CD, and Bluetooth, but its small screen shows details about the audio source with clearly labeled control options. The stereo features Pioneer's technology, Smart Sync, which lets you view data from your smartphone. The rotary knob activates a feature that reads your messages out loud so you can focus on the road. This audio system is compatible with Spotify and Pandora if you

prefer to stream your music. Use the small screen to customize the color whenever you want. The stereo delivers smooth bass thanks to the bass boost feature. Pair it with a nice set of subwoofers to create the best car stereo system. The Alphasonik earbuds only make it more desirable. However, this stereo isn't easy to install, as the instructions aren't very clear. It may also stop working after only a few months of use. Honorable Mention 3 Kenwood InDash Car Stereo Receiver Check Latest Price This Kenwood single DIN stereo is designed to look like a classic.

But despite its simplistic design, you can play HD radio, MP3 files, CDs, and iPod music. Its iPhone compatibility makes it easy for you to stream music on Pandora and iHeartRadio. You can also connect auxiliary cables. The controls are quite easy to use. In addition to playing standard file formats, the stereo also plays FLAC files. The builtin amplifier gives it muchneeded extra power. A reconstruction feature makes the sound output even clearer, you won't have to worry about not hearing background sounds. A threeband graphic equalizer and 2.5V preamp output balance sound for brilliant sound quality across different genres. You can connect the stereo to an adapter and enjoy steering wheel control. However, you must ascertain if it is compatible with the Android version of your phone; otherwise, it won't work. It may also fail to work after you've installed it. Its the companys most customizable unit, and you can create three different home screens as well as draganddrop audio sources. It features a chassis and touchscreen, the former of which fits into most singleDIN dash openings. There are five different vertical mounting positions, and it has a backup camera. You can adjust the angle of the screen up to 45 degrees forward or 20 degrees backward. Its very easy to see, and its so big that its great for showing maps and directions. The screen is glass, not plastic, and it works with Apple CarPlay, Android Auto, and more. Many users love the way it looks and sounds, and the picture quality is really good. However, the touchscreen is so large that it may block your vehicles vents. It looks like its floating in front of your dashboard, which some users may not like. Also, it doesnt have a CD player, and it is a little expensive. In addition, there may be a delay when you start your vehicle. It fits doubleDIN dashboard openings and can be used with factory steering wheel audio controls if you purchase an adapter.

The stereo sounds great, the touchscreen is very responsive, and the unit works quickly. Both CarPlay and Android Auto work well, and the backup camera immediately loads when you turn it on. It has a lot of neat features, the display is clear, and its easy to install and use. The receiver, however, does have some issues. It is a little slow when loading some web pages, and the picture quality isn't very good. It may also display popup messages that quickly become annoying. The interface is customizable, and the unit was designed with smartphones and tablets in mind. It has AppRadioLive, handsfree calling, audio streaming, and Siri Eyes Free functionality for iPhone users. This head unit works really well and is easy to install and use. It boots up quickly compared to some other models and has a lot of features. The picture is very clear, the equalizer works well, and the audio sounds great through the preouts, which is impressive for a receiver in this price range. The custom screentilt feature is also really nice, and its very clear if youre making a phone call. One downside is that it does not have an HDMI input. Also, the screen sometimes lags, and on the rare occasion, it may lock up and require a reboot to get going again. In addition, the crossover can be a hassle to adjust. Honorable Mention 7 Pioneer In Dash Multimedia Receiver Check Latest Price This Pioneer receiver has a 7inch resistive touchscreen and builtin WiFi connectivity. It works with Android Auto and Apple CarPlay, is SiriusXM ready, and has a builtin HD radio. It has tactile volume buttons and other easyaccess buttons, and the screen is very good quality. The settings and onscreen controls are simple to operate, the steering wheel controls work well, and the microphone is very clear when youre making phone calls. Also, it automatically connects to multiple phones and it lets you choose the one you want to use.

One downside is the installation may be complicated if youre not mechanically inclined. It can also get a little sluggish at times, and the glare can be quite bad on sunny days. It has an 800 by 480

resolution and a partially detachable display that is motorized. The screen tucks away when the unit is off. The receiver features both auxiliary and USB inputs. It comes with a wireless remote, harness, Bluetooth microphone, and USB extension cable. One of the best things about this receiver is that it boots up quickly. It also plays DVDs, and the sound quality is excellent, which is helped by its good-quality equalizer. It's bright enough to see during the day with sunglasses on, and its dim enough at night so you hardly notice it's there. One downside is that your iPhone or Android must be plugged in to access Carplay or Android Auto, and connectivity can be an issue. If the unit loses power, it takes a while to reboot, and the updating process is a little cumbersome. Why Trust Us All of our reviews are based on market research, expert input, or practical experience with most products we include. This way, we offer genuine, accurate guides to help you find the best picks. Learn more Benefits of Aftermarket Car Stereos More entertainment choices.
